

In the claims:

1. (original) A method of coordinating an activity at a destination of a first party and a second party comprising the steps of:
 - receiving a first signal indicative of a location of the first party, wherein the first signal is received at a central scheduling computer;
 - receiving a second signal indicative of a location of the second party, wherein the second signal is received at the central scheduling computer; and
 - creating a schedule to coordinate an activity automatically at the destination based at least in part on the first and second signals.

2. (original) The method of claim 1 further comprising the steps of:
 - receiving at the central scheduling computer an update of the location of the first party; and
 - updating the schedule automatically based on the update of the location of the first party.

3. (original) The method of claim 1 further comprising the step of estimating a time of arrival for at least one of the first party and the second party at the destination to provide estimates.

4. (original) The method of claim 3 further comprising the step of updating at least one of the estimated time of arrival of the first party and the estimated time of arrival of the second party.

5. (original) The method of claim 1, wherein at least one of the first and second signals are one of a preprogrammed audio message, a preprogrammed video message and a preprogrammed text message.

6. (original) The method of claim 1, wherein at least one of the first signal and the second signal is transmitted in response to a manual action by at least one of the first party and the second party respectively.

App. No. 09/801,093

7. (original) A method of notification upon arrival at a predetermined location comprising the steps of:
receiving a first signal indicative of a first location of a first party;
transmitting a second signal to a second party when the first location is equal to a first predetermined location; and
coordinating an activity at a second predetermined location based on the second signal.

8. (original) The method of claim 7, further comprising the step of locating the first party to provide the first location.

9. (original) The method of claim 7, wherein the step of transmitting the second signal is triggered automatically.

10. (original) The method of claim 7, wherein the step of transmitting the second signal is triggered manually by the first party.

11. (original) The method of claim 7, wherein the second signal is one of a preprogrammed audio message, a preprogrammed video message and a preprogrammed text message.

12. (original) The method of claim 7, wherein the second signal is programmed by the first party.

13. (original) The method of claim 7, wherein the first predetermined location is one of an address, an intersection, a threshold distance and a defined area.

14. (original) The method of claim 7, wherein the second signal is specific only to the first party.
